

~~SECRET~~~~SECRET~~

During the last two years our intelligence has been used for  
(1) the upgrading of certain items, for example boron from II/III to  
II/I, mercury from II/III to II/I, lithium from CCL to A1 list,  
(2) agreement to downgrade talvol from II/II to II/III and to de-  
control low grade bearings then on CCL, (3) for presently unre-  
solved negotiations for embargo of servomechanisms, converters for  
analogue computers, TV transmitters, ionosphere recording apparatus  
and bare copper wire, (4) for continuation of items in their present  
categories, and (5) in connection with the tremendous increase of  
exceptional shipments.

S/IC collaborates very closely with DSI and is kept informed  
by them of new scientific developments that are pertinent to the  
field of export controls.
